Measure of Academic Progress Assessment Data

What is MAP Growth and what does it measure?

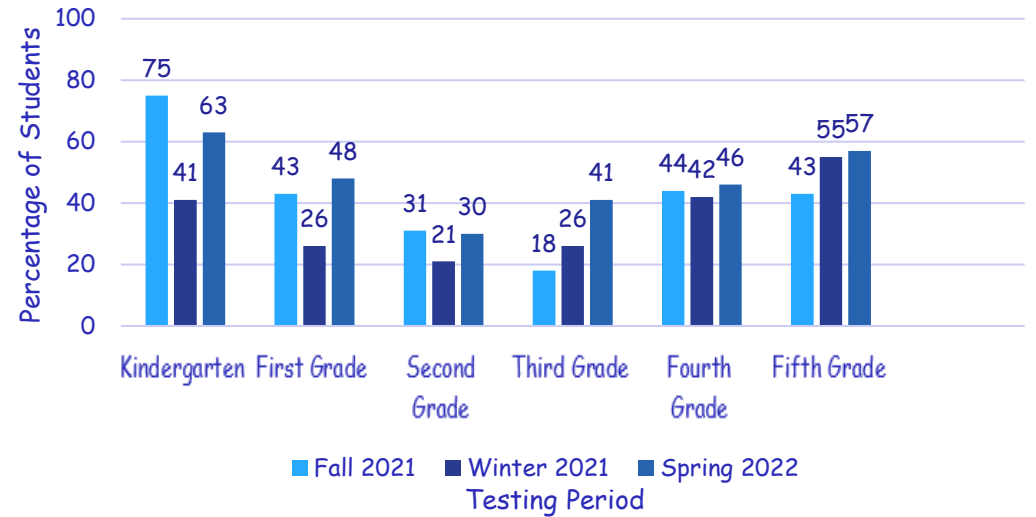

MAP Growth is a computer adaptive test. That means every student gets a unique set of test questions based on responses to previous questions. As the student answers correctly, questions get harder. If the student answers incorrectly, the questions get easier. By the end of the test, most students will have answered about half the questions correctly, as is common on adaptive tests. The purpose of MAP Growth is to determine what the student knows and is ready to learn next.

Can MAP Growth tell me if my child is working at grade level?

Just as a doctor has a chart indicating the most common heights and weights of people at certain ages, NWEA has put together charts showing the median RIT scores for students at various grade levels. NWEA researchers examined the scores of millions of students to find the average scores for students in various grades.
